

HOS 70hr Violations

Target release	FleetWatcher v3.34
Epic	 DEVSW-1396 - Jira project doesn't exist or you don't have permission to view it.
Document status	DRAFT
Document owner	Mike Stephenson
Designer	
Developers	Taber Loveless
QA	QA

-  **Current Status & Notes**
- Last Update: 06/15/2014 - **CLOSED on 11/17/2014**
- Changes have been implemented in FleetWatcher version 3.34
 - Have not heard back from David Tomshack on changes made.
 - Closed this issue as of 11/17/2014 - We have not heard any complaints since we made the changes to FW 3.34**

Goals

- Provide an easy way to see 70 hour violations on the log.
- Solution to allow for identifying any violations contained on previous revisions of a log

Background and strategic fit

1. If a driver goes in violation on his 70hr during a day, then the next day that violation may disappear due to hours received back on 70hr.
2. Need to provide a better way for driver manager/auditor to get to a revision that has the violation recorded
3. Currently in consideration with DT for improvement
4. Follow meeting with Wally's team
5. Had meeting with David and Amy to discuss our ideas for implementation. Requirements have been updated.
6. Implementation scheduled to be completed by the end of June.

Assumptions

Requirements

#	Title	User Story	Importance	Notes
1	HOS Log Overview :: Provide Yellow Violation Icon to represent when a previous revision has a violation that no longer exists in the current log  DEVSW-1397 - Jira project doesn't exist or you don't have permission to view it.	The violation icon will be yellow instead of red when there is no violation on the final revision of a log but there is a violation on a previous revision.	Must Have	<ul style="list-style-type: none">• If there is a violation on the certified (final) revision the icon will still be red.
2	HOS Log Overview :: Provide additional drill-down sub grid to provide overview of Revisions to aid in identifying which revision has a violation  DEVSW-1398 - Jira project doesn't exist or you don't have permission to view it.	Allow for expanding the information beyond the final log and open up the revisions on the HOS Logs Overview screen using a plus sign the same way we expand the drivers name on that same screen when looking at multiple drivers.	Must Have	

HOS 70hr Violations

3	<p>HOS Log Detail :: Provide indication when any revision from that day contains a violation</p> <div> DEVSW-1399 - Jira project doesn't exist or you don't have permission to view it.</div>	<p>An indicator of some kind must be placed on the certified final revision of the log to show that a violation occurred on a previous revision.</p>	<p>Must Have</p>	<ul style="list-style-type: none">It has been proposed that we change the revision indication text to red. However, we do have some freedom here, we just don't want to add too much to the UI and make it more cluttered.
