

Software Inventory

Provides detail of the software that is installed on the devices in the fleet such as:

- DateTime of the latest ELD update
- Dynamic List of all software ever installed any ELD in the account
- Version number of all software installed on the ELD

The feature also includes the ability to display only specific software components - accessible via the [customize columns] button

Screenshot of a page of results ([click to enlarge](#)):

The screenshot shows a web application interface with a table of software inventory data. The table has multiple columns, including device identifiers, software names, and version numbers. The data is organized into several rows, each representing a different software component installed on a specific device. The interface includes a search bar at the top and various filters on the left side.

Screenshot of the Customize Columns - this will include any software component ever installed on any ELD in the fleet ([click to enlarge](#)):
