

How-to Create a Route in DTNav 1.4

1. To create a route in DTNav select **NEW ADDRESS** on the main DTNav screen.

2. Enter the City and State
 - As you enter in the city the search will narrow and remove letters that will not result in a valid address.
 - The example below demonstrates how the entry options are limited once you enter "SPR".

- You can press the SYM button to get Symbol characters such as a comma.

How-to Create a Route in DTNav 1.4

- If there are more than 3 states with the same City you can use the list button to scroll through all of the remaining options.

- Once you see the correct City and State select it to move on to the next step

3. Enter the Building number.

4. Enter the Street Name.

- Entry options will be narrowed down just like when entering in a city name until only the remaining options are left to select.

- Some addresses have a street number as the name for example 415 N 500 W.
- In these cases you would enter cross street number (500 in this example) for the building number.

- This will give the option to select the cardinal directions.

- You will need to use the SYM button to enter the number for the street name.

- Confirm the destination by Pressing **GO**

- Select the route you would like to take to reach your destination.
