

Driver Detail

The Driver Detail report provides a vast array of performance metrics, including an overview report, as well as specific reports for fuel, idle, speed, and cruise control. The report can be run for a selected driver or driver group.

The Driver Detail report is ideal for identifying both the top and bottom performers in your organization, giving you the analysis you need to reward the good drivers and coach the ones that demonstrate risky behavior. It is also useful if you would like to download a large amount of driver performance data to further manipulate in Excel format.

Overview

The Overview tab provides all of the fields found on the Fuel, Idle, Speed and Cruise Control tabs on one spreadsheet (96 total metrics).

Fuel

The Fuel tab provides all driver performance metrics related to fuel consumption (21 total metrics).

Idle

The Idle tab provides all driver performance metrics related to idling (21 total metrics).

Speed

The Speed tab provides all driver performance metrics related to speed (16 total metrics).

Cruise Control

The Cruise Control tab provides all driver performance metrics related to cruise control use (9 total metrics).

All Other Fields

All other fields are defined in the [End Of Day Rollup document](#)
