Don't Gamble With Your ELD Compliance

With the ELD mandate coming in December, now is a critical time to ensure your AOBRD or ELD system is fully compliant with the new rules.   Serving the transportation for more than 25 years, DriverTech is both a safe bet for compliance and a one-stop-shop for all your in-cab and mobile workflow needs:

- **Validated ELD compliance used by the largest fleets in North America**
  - Used by over 60,000 drivers daily
  - Already used in ELD mode, successfully managing roadside enforcement events
  - Hours of service log data resides with the driver in the truck, not in the cloud where gaps in cellular connectivity disrupt tracking or create non-compliant logs
- **Best of both worlds technology - Mobile & In-Cab**
  - DT4000 in-cab platform retains up-to-the minute driver logs to ensure compliant roadside inspections
  - DT Video dash camera monitors driver behavior and captures video during critical events
  - DT Mobile app lets drivers complete vehicle inspection reports, scan documents, complete out-of-the-cab workflow and view or display hours of service information
- **Reliability and Customer Support you can count on**
  - Hands-on support to over 60,000 drivers and fleet managers
  - Knowledgeable, US-based support team with transportation experience
  - 100% system uptime for the last 10 years
  - Less than 30 second wait time for phone support
  - First call resolution greater than 95%
