[sales@driverTech.com](mailto:sales@driverTech.com)

Expand the power of the DriverTech fleet management platform by gaining true visibility into on-the-road incidents.

DT Video continuously records what your driver sees and instantly transmits video event information when hard brakes or vehicle stability control events are detected. Data appears in the FleetWatcher web portal along with second-by-second vehicle sensor data such as speed, throttle position, RPM and brake status. With DT Video you can proactively improve driver behavior, reconstruct accidents and exonerate your drivers when they are not at fault.

## High Resolution Video Events

True driver seat view with smooth and clear video. Interpretation is easy with video playback that is 30 frames per second with 1080p resolution.

## Single In-Cab Platform

Access a single platform for ELD compliance, vehicle performance monitoring and video event capture. Speed up deployment and achieve a faster ROI.

## Secure Event Playback

Get alerted when events occur and then access event details through FleetWatcher secure web portal. Control access to events and optionally download events.

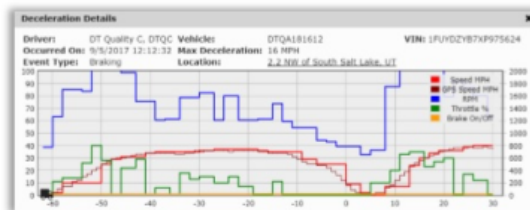

## DT Video System Components

In-cab Video Event Recorder

High Resolution Event Playback
